

“Oklahoma!” FCT Fringe 1996 at Inverleith Church Hall

Detail of proposed Scaffolding/Truss Rig (lighting/sound)

All trussing is LITEBEAM ‘SLICK’ TRUSSING (as supplied by Northern Light), and has a safe working load of 320kg (evenly distributed) for a 7m span without supports (the longest span in this case) incorporating a 3:1 safety factor.

This is in fact exactly the same as used for last year’s production.
